

Staring Engines

// Views

Goal

Set up the EJS view engine in express

Description

Use the attached `staring_engines_template.zip` and read through the code. Make sure you understand how everything works and how each file relates to the others.

Now create another route `/fact`. Each time the `/fact` route is accessed, it will serve the next fact from the following list:

1. There are more stars in the universe than grains of sand on all the beaches on Earth. That's at least a billion trillion!
2. Singapore is home to more than 390 species of birds and at least 2,100 native vascular plants, of which more than 1,500 species are classified as extant in Singapore
3. Mangroves have great capacity to take carbon out of the atmosphere. A patch of mangroves could absorb as much as 10 times the carbon of a similarly sized patch of terrestrial forest, mitigating the effects of sea level rise.
4. Quantum physics teaches us that everything is energy at the most fundamental levels. Reality is merely an illusion, although a very persistent one.
5. The word vaccine comes from the cowpox virus vaccinia which derives from the Latin word vacca for cow.

Once all facts have been served, the list loops back to the start and repeats itself.

Feel free to add or remove facts to your liking and customize the list.

Style the fact in a nice HTML page (using and EJS template).

To Submit

A zip file containing your code.
