

Conditionals

Description

Continue working on the previous project.

Add a new route `/7boom`.

The route will accept a query string parameter `num` that should be set to a number between `0-100`. It will check whether the number contains the digit 7 or is divisible by 7 and will render the `7boom` view.

Create a new view `7boom.ejs` that will use the `isBoom` template variable to determine whether to show the "BOOM" text/image of your choice or not.

So `/7boom?num=7` should show "BOOM!" and `/7boom?num=1` should show some generic message of your choice.

Hint

```
let isBoom = (num % 7 == 0) ||  
String(num).includes("7")
```

To Submit

A zip file containing your code.
